APPLICATION SETUP GUIDE

- **ABOUT**
  A simple web based customer support application.

- **SERVER REQUIREMENT**
  This application is built with the latest version of Laravel (5.5) hence it does require PHP 7, WAMPSERVER and Laravel server requirements to function well.

- **SETUP**

- Create a new folder "***customer-support***" at **www** directory of wampserver.
- Unzip and copy the content to the folder.
- Open .env file in the root folder and provide database details.

> ***DB_CONNECTION=mysql***
> ***DB_HOST=127.0.0.1***
> ***DB_PORT=3306***
> ***DB_DATABASE=sample***
> ***DB_USERNAME=sample***
> ***DB_PASSWORD=sample***

Replace "*sample*" with correct database details and save it.

DB_DATABASE =name-for-database
DB_USERNAME=database-username
DB_PASSWORD=database-password

- Open system command line and navigate to "***customer-support***" folder.
- Run the command below to create tables.

php artisan migrate

- After successful setup, open browser and navigate to:

  http://localhost/customer-support/public

- If the setup was successful, the application will open successfully.

- Create a new admin and log in to the application.
